TABLE 1	[Table title: what is being compared]	07
TABLE A1	Source rating key	09

ABOUT THE SERIES

[Two or three sentences: what the papers cover, who writes them, and how often a new one appears.]

Each paper is numbered, dated, and versioned. When a paper is revised, its version number changes and the change is logged on the back page.

Executive summary

[The problem in two sentences: what is happening, and why it will still matter in five years.]

Key findings

01 [Finding: the main claim, stated plainly enough that it could be proven wrong.]

02 [Finding: the strongest evidence, in one sentence.]

03 [Finding: the consequence the reader is most likely to miss.]

Recommendations

R1 [Who should act, and what they should do.]

R2 [A second recommendation, for a different actor.]

R3 [What to stop doing, or what to start measuring.]

1 Introduction

[Body text runs in one 5.3-inch column. Put each note right after the sentence it supports, like this.[1] To cite a source from your OSINT list, write its key in square brackets with an at sign, as Sources explains.]

[Margin note: a definition or a date. 25 words at most.]

[A paragraph the margin note sits beside. Leave a blank line between paragraphs.]

NOTES

1 A note is written where it belongs: a caret and the note in square brackets. Notes run in one sequence through the paper and print at the foot of the page.

2 Background

[What the reader needs first: the history, the actors, and the terms.]

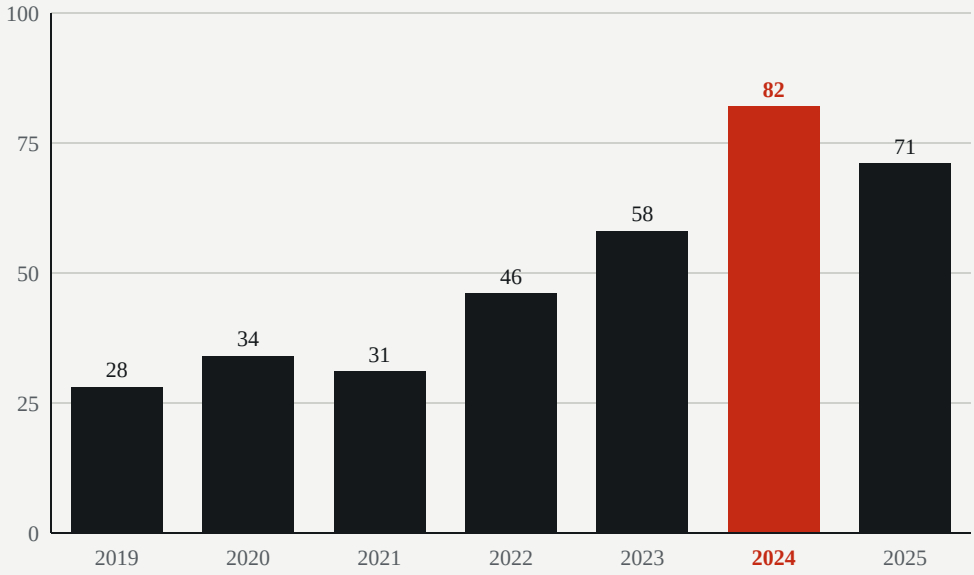

FIGURE 1

[Source: dataset, publisher, year.]

Placeholder numbers. Replace them under Visuals.

[Chart title: state the finding, not the variable]

[Unit of measure, date range]

3 Analysis

[The core argument.]

3.1 [Subsection title]

[Subsections are numbered 3.1, 3.2, and so on.]

KEY POINT

[The sentence from this paper a reader would quote.]

4 Evidence

[00]
[What this number measures, with unit and year]

[00]
[A second figure that puts the first in proportion]

[00]
[A third figure, or the comparison that surprised you]

TABLE 1

[Source: dataset or document, publisher, year. Note any gaps.]

[Table title: what is being compared]

Actor or system	Attribute	Year	Count
[Row label]	[Text value]	[YYYY]	[000]
[Row label]	[Text value]	[YYYY]	[000]
[Row label]	[Text value]	[YYYY]	[000]

5 Implications and recommendations

5.1 Recommendations

R1	[Who should act, and what they should do. Why, and what it would cost.]
R2	[A second recommendation, for a different actor.]
R3	[What to stop doing, or what to start measuring.]

5.2 What to watch

INDICATOR 1	[An event the reader could observe, and what it would confirm.]
INDICATOR 2	[A second observable event, and what it would weaken.]
INDICATOR 3	[The event that would prove this paper wrong.]

A

APPENDIX A

Method and sources

A.1 Method

[How the research was done: what was collected, from where, and over what period.]

A.2 Limitations

[What the sources cannot show, and where the analysis is weakest.]

A.3 Source ratings

Source rating key

TABLE A1

Admiralty system, as used in the OSINT Style Guide.

Code	Reliability of source
A	Completely reliable
B	Usually reliable
C	Fairly reliable
D	Not usually reliable
E	Unreliable
F	Reliability cannot be judged

Code	Credibility of information
1	Confirmed by other sources
2	Probably true
3	Possibly true
4	Doubtful
5	Improbable
6	Truth cannot be judged

A note may carry a two-character rating: a letter for the reliability of the source and a number for the credibility of the information. B2 means a usually reliable source reporting information that is probably true.

About this paper
